

Dv Project

Simple CAD Document Control

What is Dv Project?

Dv Project is an "out-of-the-box" edition of Dv TDM, a global leading software product used in the management of Engineering Drawings and Documents. Dv Project uses industry standard best business processes for check-out, revising, and document numbering. Clients may modify functionality of the application with the administration module or employ remote modifications from a Practical Programs' Product Specialist.

What does Dv Project do?

Dv Project is the perfect tool for indexing local directories for easy search and retrieval. Dv Project can also be used to manage the full life-cycle of active documents (from origination to archival) and serve as the distribution mechanism for those documents outside of your organization. The internal document viewer supports over 200 file formats without requiring installation of the native application. Including files created with: AutoCAD, Microstation, Office, PDF, and E-Mail.

- Check-In/Out

modifications can be quoted as
required.

What do I need to install Dv Project?

Dv Project is recommended for 10 or fewer concurrent users on a local network. If you require more than 10 concurrent users, web versions, or a distributed network, the full Dv TDM product is recommended. Dv Project may be installed on a server and accessed from local machines or on a stand alone computer.

Minimum server requirements:

Pentium III (1GHz)
